

# WORLD RECORD

## International Camporee World Record Attempt

### What is GBC?

GBC stands for Great Ball Contraption. It is a Rub Goldberg still machine made up of models to move small LEGO™ type balls from one location to another.

### Who can Participate?

Any one attending the International Camporee in 2024 at Gillette can participate. It can be an individual, a group or a club.

### How can I find out more?

## Calling all LEGO™ fans

We are going to try to break the Great Ball Contraption (GBC) World Record at Gillette!

What is GBC? It's a crazy fun machine. Each participant builds a contraption (module) which moves a ball from one side to the other, like a bucket brigade.

All of the modules are put together to form a continuous loop. There are lots of YouTube videos of different loops on line.

Here is a link to the current record holder,

<https://www.youtube.com/watch?v=GYIO4Ry3Qak>

## Scholarships

There will be six \$500 scholarships awarded for the best modules based on the judging criteria. These scholarships are to any Seventh-Day Adventist school world wide.

## Judging Criteria for Scholarships

Reliability - Operates without interruption for 30 minutes

Durability - How sturdy

Path/Mechanism - Interest/ originality of the ball path

Aesthetics - Over all look

Creativity - Creativity

## At Gillette

**Check in** for module will be Tuesday afternoon 1:00 to 4:00 pm. and Wednesday morning 9:00 to 11:30.

**Pick up** your module on Friday morning between 11:00 and 1:00 pm.

# General Rules

1. Each module should have an "in-basket", and will move balls to the next module's in-basket, which must be directly in line.
2. The in-basket should be 10 studs by 10 studs (outside dimension) with an 8-stud by 8-stud opening, and should be 10 bricks tall.
3. The front of the basket should be no more than 32 studs from the back of the module. This will allow all modules to be lined up against a wall. The back of the module can be closer to the basket, but not farther.
4. The in-basket should be located on the left side of the module, and output should go to the right.
5. There are no size limits beyond those listed.
6. Each module should be able to accept balls at an average rate of 1 ball per second. Balls can be passed continuously, or in a batch. A batch should not exceed 30 balls.

## Important Information

All blocks must be Lego or Lego compatible. Also, Your Model needs to work with Bricklout GBC balls they are available from Bricklout or from Amazon. If you have official Lego™ soccer balls they will also work.
